## DETAILED ACTION

### *Election/Restrictions*

1. This application contains claims directed to the following patentably distinct species of the claimed invention.
2. This application contains two sets of election requirements. The First Set is directed towards the different species of forming a thin resistive film. The Second Set is directed towards the different species of forming a fluid passage in a body. The applicant(s) is required to elect a single specie in each set.

#### First Set:

Species I, which is directed towards forming a thin resistive film by introducing a metal in solution, suspension or dispersion.

Species II, which is directed towards forming a thin resistive film by introducing a platinum salt and heating the platinum salt.

Species III, which is directed towards forming the thin resistive film by coating a layer metal powder, salt or oxide in solution, suspension or dispersion; and heating the layer.

Species IV, which is directed towards forming the thin resistive film by depositing material by coating of the interior with a metal salt solution; and heating the passage to reduce the deposited material.

#### Second Set:

Species I, which is directed towards forming the fluid passage by bonding three or more layers together.

Species II, which is directed towards forming the fluid passage by machining a rectilinear block body.

Species III, which is directed towards forming the fluid passage by forming a capillary sized fluid passage in a rectilinear block body or multilayer body.

Species IV, which is directed towards forming the fluid passage by forming a non-linear or tortuous passage in a rectilinear body or multi-layer body.

Applicant is required under 35 U.S.C. 121 to elect a single disclosed species for each Set for prosecution on the merits to which the claims shall be restricted if no generic claim is finally held to be allowable. Currently, claims 26, 29, 42, 43, 45 and 46 are generic.

Applicant is advised that a reply to this requirement must include an identification of the species that is elected consonant with this requirement, and a listing of all claims readable thereon, including any claims subsequently added. An argument that a claim is allowable or that all claims are generic is considered nonresponsive unless accompanied by an election.

Upon the allowance of a generic claim, applicant will be entitled to consideration of claims to additional species which are written in dependent form or otherwise include all the limitations of an allowed generic claim as provided by 37 CFR 1.141. If claims are added after the election, applicant must indicate which are readable upon the elected species. MPEP § 809.02(a).

Should applicant traverse on the ground that the species are not patentably distinct, applicant should submit evidence or identify such evidence now of record showing the species to be obvious variants or clearly admit on the record that this is the case. In either instance, if the examiner finds one of the inventions unpatentable over the prior art, the evidence or admission may be used in a rejection under 35 U.S.C. 103(a) of the other invention.

3. Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement be traversed (37 CFR 1.143).

4. Applicant is reminded that upon the cancellation of claims to a non-elected invention, the inventorship must be amended in compliance with 37 CFR 1.48(b) if one or more of the currently named inventors is no longer an inventor of at least one claim remaining in the application. Any amendment of inventorship must be accompanied by a request under 37 CFR 1.48(b) and by the fee required under 37 CFR 1.17(i).
